I have set myself the task of determining the modes of
applying the fundamental concepts and the results of the
contemporary metric and spectral theory of dynamic
systems to the study of conservative dynamic systems
of classical mechanics. (Author)

CONTRACTION OF ORIENTED POLYMERS DURING

DESCRIPTORS: *Plastic films, *Polyethylene plastics,

*Annealing, Physical properties, *Crystal structure,
Transformations.

At each temperature, there is a definite amount of
isothermal contraction in the crystalline polymer which
was stretched at a lower temperature until a neck was
formed in the direction of the fiber length. The iso-
thermal contraction of stretched crystalline polymers
increases with increasing temperature. The increase
in the isothermal contraction with increasing tempera-
ture can be interpreted as a result of the irreversible
decrease in the degree of oriented crystallinity. (Author)
